## Tuberculosis, Leprosy and Other Mycobacterial Diseases of Man and Animals: The Many Hosts of Mycobacteria

Mycobacteria are bacterial pathogens which cause diseases in humans and non-human animals. This monograph will primarily cover the most important and widely researched groups of mycobacteria: members of the *Mycobacterium tuberculosis* complex (MTC) and *Mycobacterium leprae*, across a wide range of host species. *M. tuberculosis* and *M. bovis* are particularly relevant with the increasing drug resistance and co-infection with HIV and the possible cross-infection of badgers and cattle associated with *M. bovis*. This ideal reference for researchers working in different fields draws together information on different pathogens, and by considering the diseases in a zoonotic context provides a One Health approach to these important groups of diseases.
