Information and Meaning in Evolutionary Processes (Cambridge Studies in Philosophy and Biology)

William F. Harms

William Harms develops the conceptual foundations and tools for a science of knowledge through the application of evolutionary theory, thus allowing us to acknowledge the legacy of skepticism while denying its relativistic offspring. The most significant legacy of philosophical skepticism is the realization that our concepts, beliefs and theories are social constructs. This belief has led to epistemological relativism, or the thesis that, since there is no ultimate truth about the world, theory preferences are only a matter of opinion.
