## **Life and Death of Stars** Donald A. Cooke

The Life and Death of Stars presents a coherent picture of the birth, growth, middle age, and sometimes violent death of stars, showing that these different manifestations represent stars in different stages of their life cycles. This is a drama played out over unimaginable distances, involving esoteric concepts of nuclear chemistry, relativity, and quantum mechanics. Its discovery involved the greatest minds of modern astronomy, years of painstaking accumulation of data, and quick, brilliant leaps of intuition. And it is a story full of import for humanity, because the very elements we and all living entities are made of were created in the fiery deaths of stars that were born and passed away long before our sun was formed. With hundreds of illustrations in full color and black and white, the latest NASA satellite photographs, and unique charts and diagrams prepared especially for this book.
