## **Fear of the Invisible** Janine Roberts

This book takes its readers on a journey into the very heart of the hunt for viruses - to the key experiments originally performed to prove that these invisibly small particles are the cause of diseases previously blamed on toxins or bacteria and into the latest research. It sheds light on the extraordinary assumptions that underlay much of this research - and on the vaccines that developed from this. The author, an investigative journalist who has researched and produced investigative films for the BBC, American and Australian television, was asked by parents with children severely ill after vaccination, to discover if the medical authorities were hiding anything from them. She agreed, but had no idea how long this search would take. She expected at best to uncover a small degree of contamination. On the ensuing decade-long journey of discovery, she learnt it is not just the added mercury that we have to worry about. She discovered that the top government scientists admit to colleagues that vaccines are contaminated with viruses from chickens, humans and monkeys, with RNA and DNA fragments, with 'cellular degradation products', and possibly 'oncogenes and prions.' They report alarmingly that it is impossible to commercially purify vaccines. They express great concerns, but the public is not told despite the possible consequences for long-term public health. A recent US court decision has linked autism with vaccine contamination. The author cites her sources by name - and gives references and Internet links where they are available. I She reveals evidence that the World Health Organisation has discovered the MMR vaccine is contaminated with chicken leukosis virus, but has decided not to tell the public of this, and to continue to make the vaccine with eggs from contaminated chickens. She reports US biowarfare researchers tried to create new agents to destroy our immune systems - and worked on a bacterium to make it a hospital superbug. Did they manage to create HIV? A senior professor told her that the vaccine program was so contaminated that HIV might well have spread though it without any need for military intervention. She set out to find the evidence to resolve this, and to learn how HIV apparently spread so far and fast. She needed to know more about this virus so went to the foundation research widely held today to have found HIV and proved it caused AIDS. She was then rocked to discover that this same research was investigated for scientific fraud for a five year period by powerful US scientific institutions and by Congress,. Why is this not widely known? She found their reports and discovered they found major errors in this research, some so serious that these made it impossible to repeat these experiments and thus to verify them! She reveals the evidence unearthed - reproducing key documents so the reader can assess them for themselves. This is explosive material. In the final part of this book the author reports recent research that is revolutionising biology and offering much hope for the future. These new developments shed new light on the relationships between our cells and viruses. They are not necessarily enemies. Readers may find these new developments radically change the ideas they have held about viruses since childhood. This book has over 500 references and includes several documents unearthed under Freedom of Information legislation. `It has a scientific glossary and is fully indexed..
